Evening Brief

Date: Wednesday September 19th, 2018

Weather Summary

A cold front will push across the southern Great Basin, into Southern Utah. This will bring a shift to NW winds and sharply cooler temperatures, 7-12 degrees cooler for many areas. RH will be up several percent today, but with near record dry fuels, there could be several hours of critically dry 20-35 mph winds across eastern areas of Utah/Idaho and western Wyoming.

Winds will diminish Friday with seasonable conditions, but will increase again over the weekend ahead of another cold front dropping down from the Pacific NW. NW Nevada, Northern Utah and Southern Idaho into Western Idaho could see gusts near 30 mph spreading from west to east Saturday thru Monday.

No significant precipitation for the next seven days, except for some early Thursday across extreme SE Utah and across the highest terrain of the northern portions of the Salmon Challis NF in Idaho.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	4	Light Initial Attack Activity
National	3	GB New Fires and Acres: 7 fires 1020.7 acres; 18,992 acres large fire growth

Great Basin Fuel Status [interactive link](#) (Use Edge, Chrome or Firefox browsers)

Fuels and Fire Behavior advisory has been updated and issued for [Northern Great Basin](#)

Fuels/Fire Potential

ERCs remain very high for the time of year over the northern 2/3 of the Great Basin. ERCs are above the 80th-90th percentile, with much of eastern Idaho, northern Utah into northern Nevada above the 97th percentile. Most of the Great Basin is seeing ERCs near or above records for the time of year. 1000-hr fuel moisture over nearly all of the Great Basin is below normal and many areas of southern Idaho and the northern half of Nevada and Utah are still near record lows for the time of year. Fuels across southern areas have slowly but steadily dried and now can support fire growth as well.

Sagebrush Live Fuel Moisture levels across the northern 2/3 of the Great Basin are well below mid-September normals, with some areas near record lows and as low as 60-80% in many areas of Northern Nevada, NW Utah, and far Southern Idaho. Grasses are cured in all areas, with above normal carryover fuel across Northern Nevada and far southern Idaho.

Resources

Aviation within the Great Basin

- 3 VLAT's, 6 LATs, 4 CL-415's
- 20 SEATs, 4 Fire Bosses
- 12 Type 1 Helicopters / 10 Committed
- 14 Type 2 Helicopters / 10 Committed
- 23 Type 3 Helicopters

Crews Committed within the Great Basin

- 24 IHCs Committed / 0 Available
- 43 T-2 IAs Committed / 0 Available
